

Pickleball Court Flooring Solutions

Flooring Maintenance & Care – 2026 EDITION

Serving the pickleball industry since 2018

- **Purpose:** To guide clients in extending the lifespan of their court and demonstrate our commitment to the product's full life cycle.
- **Routine Cleaning:** Regularly rinse the surface with clean water to remove dust and grit, preventing micro-particles from wearing down the acrylic surface during play.
- **Stain Removal:** For beverage or organic stains, use a mild neutral detergent with a soft-bristled brush. Strictly avoid strong acids, alkalis, or solvent-based cleaners.
- **Footwear Restrictions:** Spiked shoes and high heels are strictly prohibited. Such footwear can cause permanent physical damage to the specialized acrylic layer.
- **Vehicle & Load Management:** Bicycles, skateboards, roller skates, or motor vehicles are not allowed on the court. Do not place sharp heavy objects or unpadded equipment directly on the surface.
- **Surrounding Environment:** Keep surrounding vegetation trimmed to prevent root damage to the sub-floor and avoid surface discoloration from decaying leaves.
- **Periodic Inspection:** We recommend a periodic status check every 12 months to identify and repair minor physical damage, ensuring the court maintains optimal anti-slip and bounce performance.
